* Bootstrap *

+ Pros -
- Popular
- Saves time
- loades of styles
- Responsive
- Customisable
- Great support

Cons :-
- Bulky
- Popular
- Grid

+ Mobile first approach.

 # Breakpoints

XS - <576 px
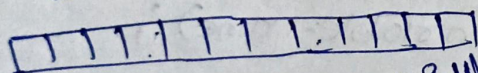

Sm - <768 px

md - <992 px

lg - 999 onwards

Xl - 1200 onwards

- You can change the values.
- They define how the width of the content would adjust across different device sizes.

 # 12 column grid.   Container → row → col

class = "col-4" will cover   ← xs default

class = "col-sm-6"   for small screen

Utilities for layout / Utilities

 # Display utility

d - value ──→ for xs

d - breakpoint - value.

ex. d-lg-none

values ; none, block, inline block. etc.

- Margin and padding utilities'
  (m/p - side)- breakpoint - size.

  ~~mt~~

  mt - 2   — margin top

                  t b ⊕ l r x y
                              | |
                             lr   tb

- Border
  Additive - border, border-top, . _ _ _
  Subtractive - border-0, border-top-0 . ~
  - Color - border-primary, border-danger
         border - secondary , . . _
  sizes : rounded - lg,
  — Border-width not available to override.
       . border-dark {
              border-width: 4px !important;
       }
       ↳ css file after CDN.

A. Components
 * Buttons . (btn) along with button tag
    btn-primary
    You can use it with anchor tag also but
    mention role = "button".

  * Card -   card

  * dropdown -   after clicking
                                    ↓
  * Modal .   ⟵ bound | modaltext |
                          | ——— |
                          | ——— |
                          | ? |
                          |_____|

  data-toggle = "modal"   data-target = "# xyz"
